

Response to Covid-19:
Fast-fit modular partition and
screening systems

NHS Rainbow Hospital Deeside

nhs nightingale

Kwik-Klik and sister Company AM-Clad reacted quickly to the first spike in coronavirus hospital admissions and were on hand to supply both existing NHS hospitals and the new Nightingale temporary hospitals with flexible PVC modular hoarding and hygienic cladding.

The flat-pack bed segregation system seen above at the NHS Rainbow Hospital Deeside in North Wales, creates a fast-fit configuration with easy-clean hygienic surfaces.

The Kwik-Klik team were on site at the sports facility to provide installation training to local contractors. PVC bed partition systems were installed in the sports hall and the ice rink.

AM-Clad also supplied over 14,000 square metres of hygienic PVC cladding to the flagship Nightingale hospital at London's ExCel Centre.

All of our systems are designed to support the wide-ranging Infection Control measures in place in each healthcare environment.

fast-fit modular solutions

Bristol Royal Infirmary ICU

Salisbury District Hospital
ED bay enclosures installed within one week
from receipt of order.

Kwik-Klik have also responded quickly to the need to create new temporary Covid-secure Intensive Care Units and Isolation Rooms within existing NHS Wards and ED Departments.

Our Floor-to-Ceiling partition system creates a sealed environment with secure access doors and vision panels built in as needed. The system creates a hygienic partition wall with minimum disruption and down time and meets all HSE Temporary Works Design criteria.

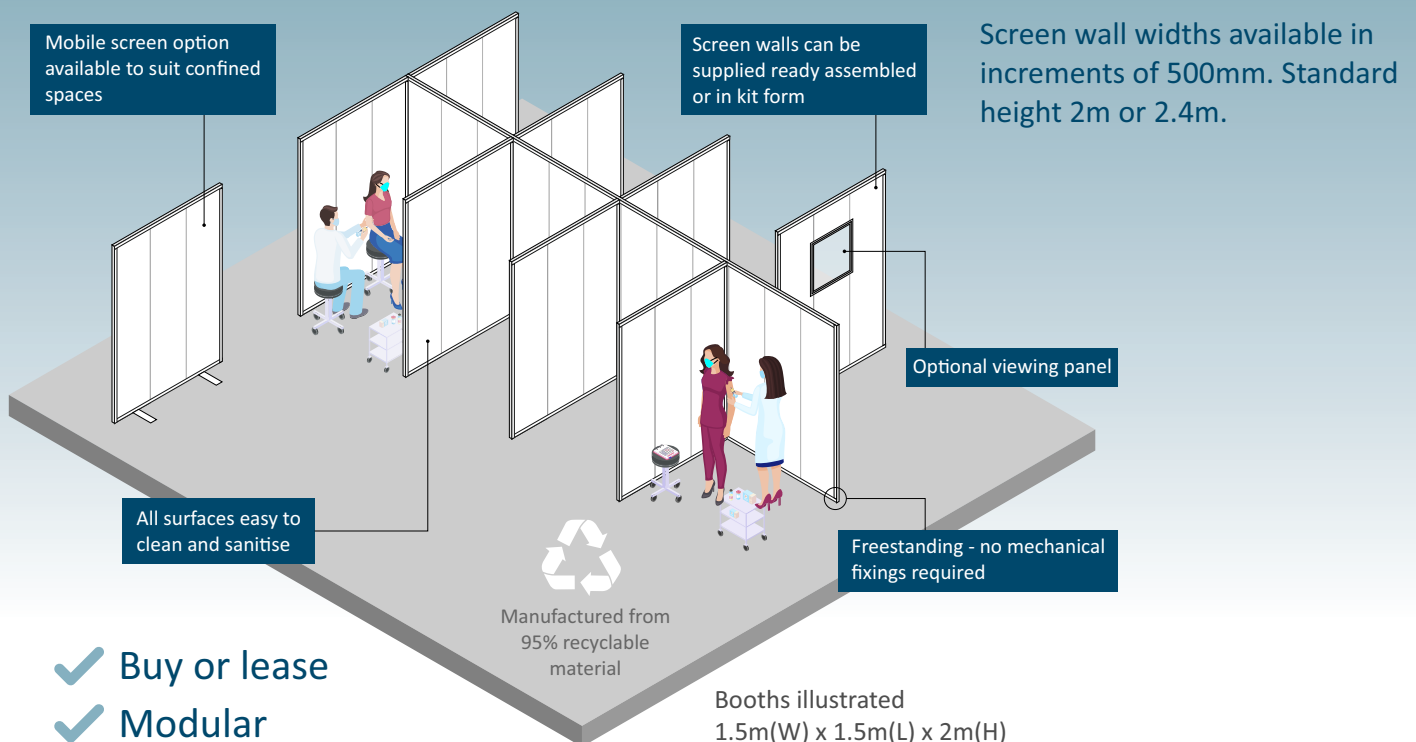

For time sensitive projects, components can be supplied oversize and adapted on site. Kwik-Klik offers a full design and install service or a supply-only basis to the Trust's own contractors if preferred.

- Cost-effective
- Fast-fit
- Flexible
- Minimum downtime
- 95% recyclable components

vaccination booths

- ✓ Buy or lease
- ✓ Modular
- ✓ Fast-fit
- ✓ Re-usable and re-locatable
- ✓ 95% recyclable components
- ✓ Easy to clean and sanitise

Kwik-Klik can supply fast-fit temporary Vaccination Booths to suit the spatial arrangements of buildings designated as vaccination centres/hubs.

The stability and hygienic performance of our system is proven and our Vaccination Booths can be configured to suit any room size - from small surgeries to large spaces such as sports halls.

bespoke solutions

“

We have found Kwik-Klik to be very responsive to the needs of the Trust in delivering bespoke solutions to provide screens to all our reception areas and larger open plan offices.

They provided us with quick, cost effective solutions to patient facing areas which gave our staff confidence to continue to come into work.

This was a supply and fit service which was carried out with little fuss in a clean and safe manner.

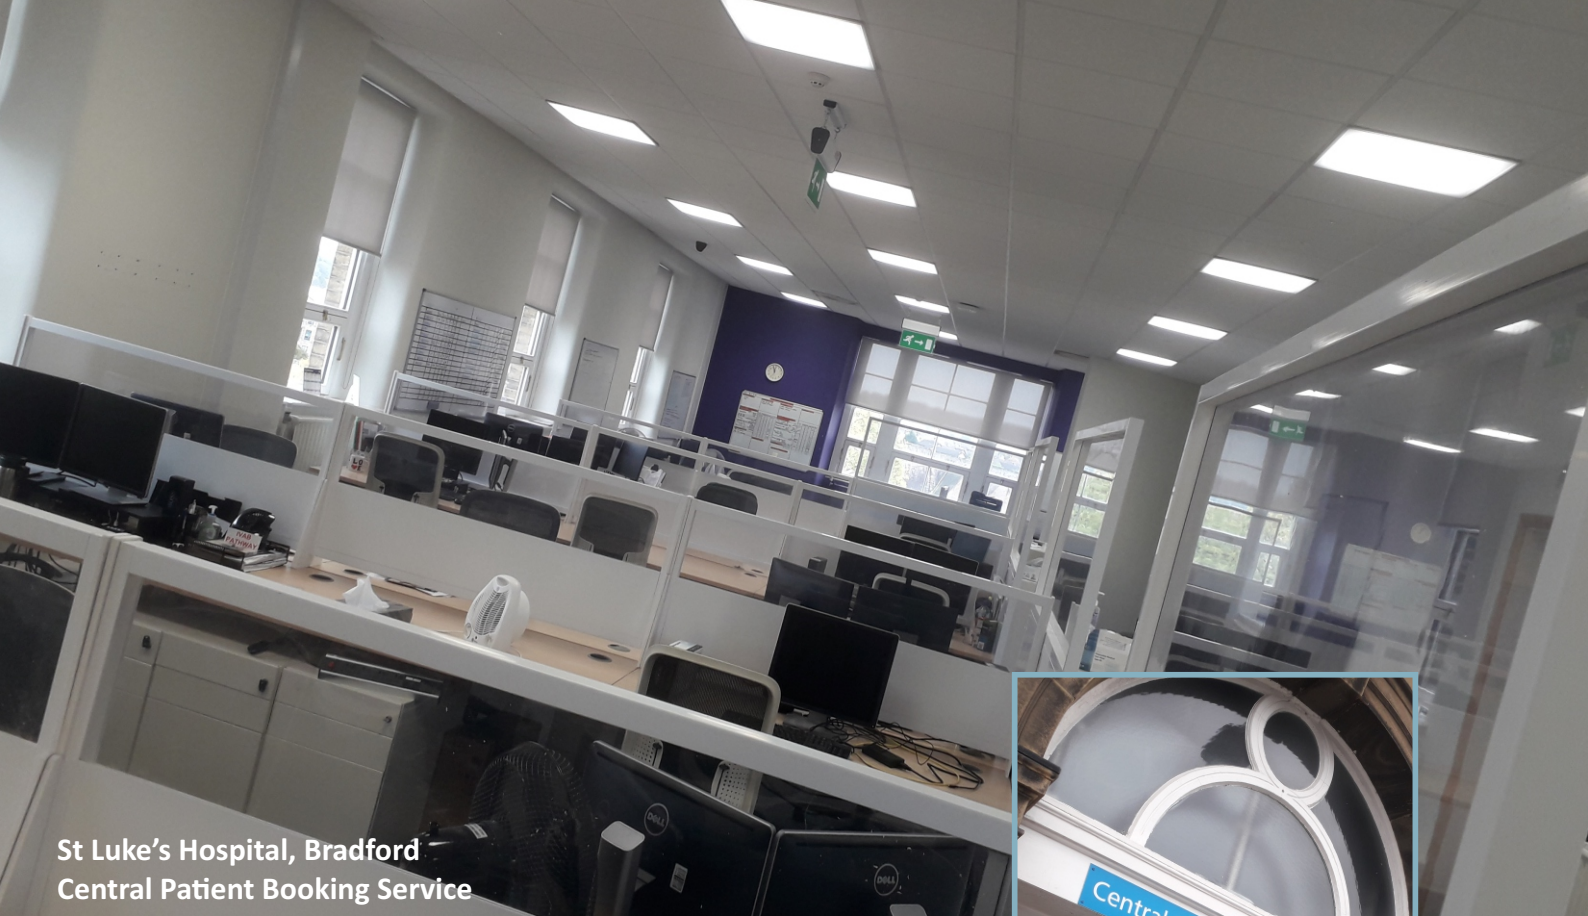

The modular screen solutions enable office spaces to be divided up, creating covid-secure workplaces. The screens are self-supporting and can be moved around to suit any office configuration.

StaySafe FLEXI-SCREEN

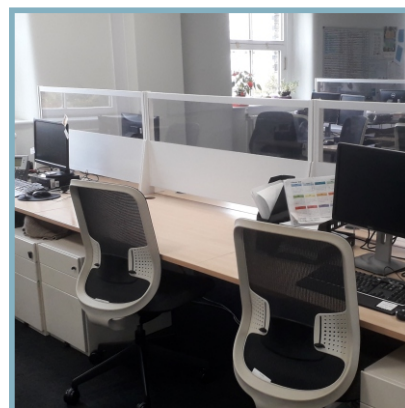

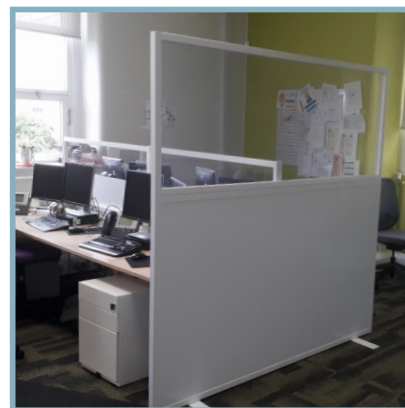

StaySafe Flexi-Screen is a portable modular partition which instantly creates social distancing to protect healthcare workers, patients and visitors.

With a range of standard sizes the ready-to-use system can be used in almost any location - including entrances, corridors, waiting areas, canteens, cafes, pharmacy counters, lift exits and communal areas.

The system is available with simple steel base supports or heavy-duty lockable castors. Both versions are fully portable and easy to re-position.

Screens are constructed in pvc with all surfaces wipe clean and easy to maintain.

Bespoke sizes and configurations including desktop/workstation dividers can be designed to suit site-specific requirements as seen in the photographs of St Luke's Hospital, Bradford.
